

House Price Prediction

Project Report | Gulshan Kumar - Python & Data Science Projects

Objective

Regression project to estimate house price using area, rooms, location and age.

Technologies Used

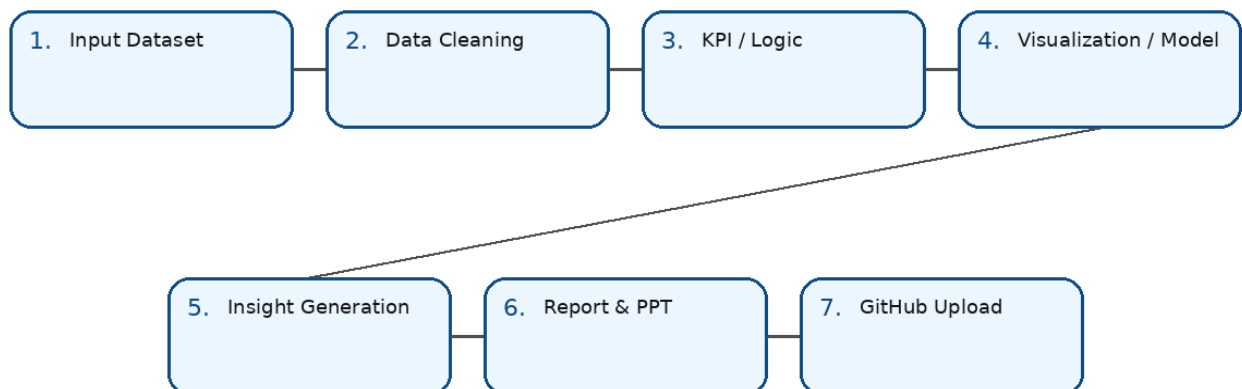

Python, Pandas, NumPy, Matplotlib, OpenPyXL/Excel, Scikit-learn

Modules

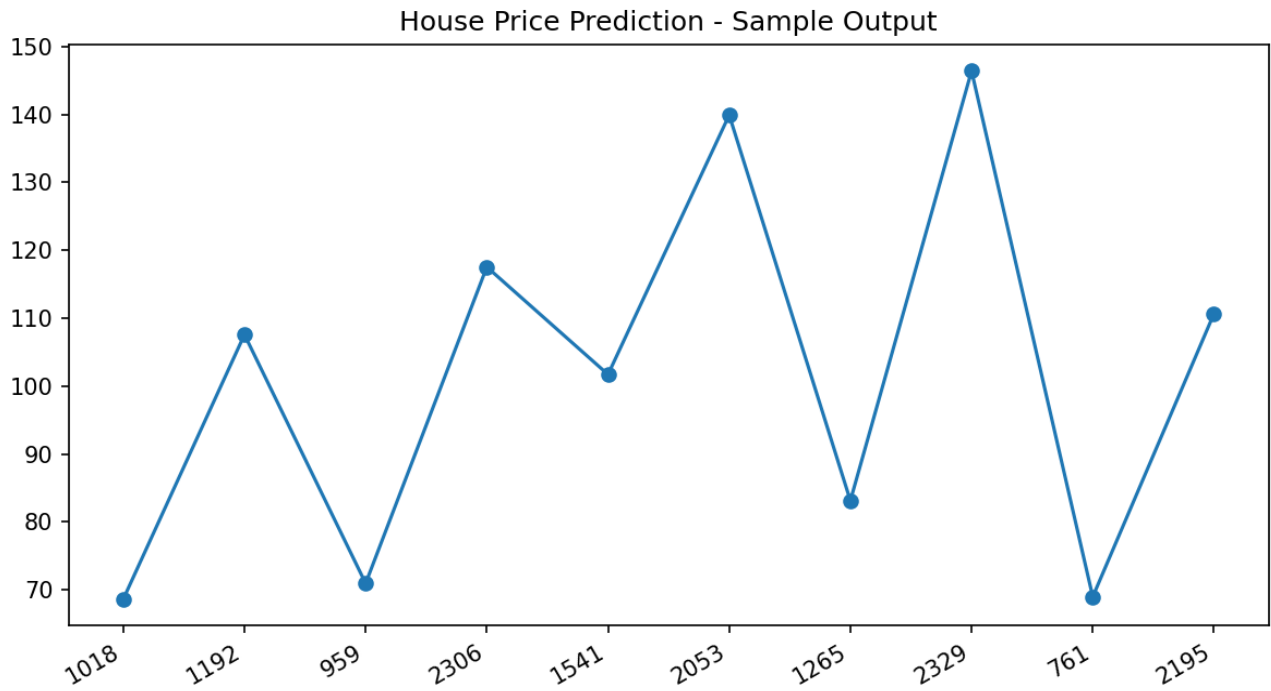

- Data collection and loading
- Data cleaning and validation
- KPI calculation and summary metrics
- Visualization and dashboard creation
- Insights/recommendations
- Documentation and GitHub upload

Architecture / Flow Diagram

House Price Prediction

Sample Output / Dashboard Screenshot

Key Features

- Clean folder structure
- Reusable Python source code
- Excel/CSV dataset
- PDF documentation
- PowerPoint presentation
- README and requirements file
- Resume-ready project summary

Conclusion

This project demonstrates practical skills in Python programming, data handling, visualization, analytics and professional documentation. It is suitable for GitHub portfolio, resume, interviews and learning practice.
